At the end of 2018 the big news in Continental tyres was the introduction of a successor to the Grand Prix 4000 S II, unsurprisingly named the Grand Prix 5000. Not only did Continental replace arguably the most successful clincher tyre of all time, but they finally produced a tubeless version.

Starting from the beginning, this book explains the development process of all parts related to the topics tire, wheel and tire pressure monitoring system. This is continued by the modern project management methods in the development process of the parts and the necessary tests to build up this safety relevant components. Modern methods for simulations are described.

At a time when Internet use is closely tracked and social networking sites supply data for targeted advertising, Lars Heide presents the first academic study of the invention that fueled today's information revolution: the punched card. Early punched cards helped to process the United States

census in 1890. They soon proved useful in calculating invoices and issuing pay slips. As demand for more sophisticated systems and reading machines increased in both the United States and Europe, punched cards served ever-larger data-processing purposes. Insurance companies, public utilities, businesses, and governments all used them to keep detailed records of their customers, competitors, employees, citizens, and enemies. The United States used punched-card registers in the late 1930s to pay roughly 21 million Americans their Social Security pensions, Vichy France used similar technologies in an attempt to mobilize an army against the occupying German forces, and the Germans in 1941 developed several punched-card registers to make the war effort—and

surveillance of minorities—more effective. Heide's analysis of these three major punched-card systems, as well as the impact of the invention on Great Britain, illustrates how different cultures collected personal and financial data and how they adapted to new technologies. This comparative study will interest students and scholars from a wide range of disciplines, including the history of technology, computer science, business history, and management and organizational studies.

What came before 'postmodernism' in historical studies? By thinking through the assumptions, methods and cast of mind of English historians writing between about 1870 and 1970, this book reveals the intellectual world of the modernists and offers a full

analysis of English historiography in this crucial period. Modernist historiography set itself the objective of going beyond the colourful narratives of 'whigs' and 'popularizers' in order to establish history as the queen of the humanities and as a rival to the sciences as a vehicle of knowledge. Professor Bentley does not follow those who deride modernism as 'positivist' or 'empiricist' but instead shows how it set in train brilliant new styles of investigation that transformed how historians understood the English past. But he shows how these strengths were eventually outweighed by inherent confusions and misapprehensions that threatened to kill the very subject that the modernists had intended to sustain.

A massive, long-overdue retrospective on the multimedia image critique of Hito Steyerl, influential artist and author of *Duty-Free Art* and *The Wretched of the Screen* Over the past 30 years, through video and installation, the immensely influential German artist and writer Hito Steyerl (born 1966) has been tracking the ways that images have mutated--from

the analogue image and its manifold possibilities for montage to the fluidity of the split digital image--and the implications these mutations have had for the representation of wars, genocides and the flow of capital. "We are no longer dealing with the virtual but with a confusing and possibly alien concreteness that we are only beginning to understand," writes Brian Kuan Wood of the digital visual worlds that the artist presents. At nearly 500 pages, this book--the first substantial overview on Steyerl--looks at multimedia installations and film projects of the past ten years, as well as earlier works, all of which are united by the artist's unflinching interrogation of the politics of the image.
