GM, in all its wisdom, uses plastic intake manifold gaskets on the 3.8L engines that are super prone to breaking and leaking antifreeze. Although this issue does not usually lead to overheating problems, it doesn't let the cooling system pressurize like it's designed to, this lead to internal hot spots in the engine that eventually lead to blown head gaskets.

3.8L (229 CID) The 229 cu in (3.8 L) engine was first introduced for the 1980 model year. This engine replaced the 250 cu in (4.1 L) straight-six in full-size Chevrolets and Camaros as the new base V6. Additionally, the intermediate Chevrolet Malibu and Monte Carlo also used the 229 cu in (3.8 L) as a replacement for both the 200 cu in (3.3 L) V6 and the 231 cu in (3.8 L) Buick V6.
