This book leads readers through an intriguing examination how books began and have evolved through history, and explores where future technologies may lead them. From ancient clay tablet and scrolls to medieval manuscripts and printed books to personal computers and iPads, this guide examines the fascinating history of books from 4000 BCE to the present. At each step of this evolution, technologies are examined and evaluated to show how these ideas are present from the very beginning of written communication. Moving chronologically from the ancient world to the present, the book shows how written communication media evolved from cuneiform to the Kindle. Focusing on key technologies and vital periods of historical transition, it traces an evolution that elucidates the history of the written word, at each step examining and evaluating such aspects of technologies as memory capacity, readability and writability, durability, recyclability, information security, ease and mode of access, and cost. Additional attention is paid to how these technologies were made, how they were circulated, and who was reading them. Provides faculty and students with a brief but fascinating and engagingly written textbook Includes hands-on activities and course assignments that encourage student learning Features interesting factoids and illustrations, making this book useful as a text, as a professional guide, or for pleasure reading

An illustrated, large-format edition of the best-seller has been expanded to encompass the remarkable advances that have occurred in science and technology over the past eight years, with a new chapter on Wormholes and Time Travel and more than 240 full-color, captioned illustrations. 100,000 first printing.

What will planet Earth be like in twenty years? At mid-century? In the year 2100? Prescient and convincing, this book is a must-read for anyone concerned about the future. Never has the world offered more promise for the future and been more fraught with dangers. Attali anticipates an unraveling of American hegemony as transnational corporations sever the ties linking free enterprise to democracy. World tensions will be primed for horrific warfare for resources and dominance. The ultimate question is: Will we leave our children and grandchildren a world that is not only viable but better, or in this nuclear world bequeath to them a planet that will be a living hell? Either way, he warns, the time to act is now.

A reissue of a charming little illustrated volume originally published in 1974 which walks the reader through the highlights of the history of the University of California.

The epic story of the scientists through the ages who have sought answers to life ' s biggest mystery: How did it begin? In this essential and illuminating history of Western science, Bill Mesler and H. James Cleaves II seek to answer the most crucial question in science: How did life begin? They trace the trials and triumphs of the iconoclastic scientists who have sought to solve the mystery, from Darwin ' s theory of evolution to Crick and Watson ' s unveiling of DNA. This fascinating exploration not only examines the origin-of-life question, but also interrogates the very nature of scientific discovery and objectivity.

One of the world ' s most beloved and bestselling writers takes his ultimate journey -- into the most intriguing and intractable questions that science seeks to answer. In A Walk in the Woods, Bill Bryson trekked the Appalachian Trail -- well, most of it. In In A Sunburned Country, he confronted some of the most lethal wildlife Australia has to offer. Now, in his biggest book, he confronts his greatest challenge: to understand -- and, if possible, answer -- the oldest, biggest questions we have posed about the universe and ourselves. Taking as territory everything from the Big Bang to the rise of civilization, Bryson seeks to understand how we got from there being nothing at all to there being us. To that end, he has attached himself to a host of the world ' s most advanced (and often obsessed) archaeologists, anthropologists, and mathematicians, travelling to their offices, laboratories, and field camps. He has read (or tried to read) their books, pestered them with questions, apprenticed himself to their powerful minds. A Short History of Nearly Everything is the record of this quest, and it is a sometimes profound, sometimes funny, and always supremely clear and entertaining adventure in the realms of human knowledge, as only Bill Bryson can render it. Science has never been more involving or entertaining.

New York Times Bestseller A Summer Reading Pick for President Barack Obama, Bill Gates, and Mark Zuckerberg From a renowned historian comes a groundbreaking narrative of humanity ' s creation and evolution—a #1 international bestseller—that explores the ways in which biology and history have defined us and enhanced our understanding of what it means to be " human. " One hundred thousand years ago, at least six different species of humans inhabited Earth. Yet today there is only one—homo sapiens. What happened to the others? And what may happen to us? Most books about the history of humanity pursue either a historical or a biological approach, but Dr. Yuval Noah Harari breaks the mold with this highly original book that begins about 70,000 years ago with the appearance of modern cognition. From examining the role evolving humans have played in the global ecosystem to charting the rise of empires, Sapiens integrates history and science to reconsider accepted narratives, connect past developments with contemporary concerns, and examine specific events within the context of larger ideas. Dr. Harari also compels us to look ahead, because over the last few decades humans have begun to bend laws of natural selection that have governed life for the past four billion years. We are acquiring the ability to design not only the world around us, but also ourselves. Where is this leading us, and what do we want to become? Featuring 27 photographs, 6 maps, and 25 illustrations/diagrams, this provocative and insightful work is sure to spark debate and is essential reading for aficionados of Jared Diamond, James Gleick, Matt Ridley, Robert Wright, and Sharon Moalem.
