Abstract. Surprising version-dependent differences are noted in student performance on certain questions in a standardized general chemistry exam. The exam in question has two versions, on which both questions and answers are ordered differently. For the questions suspected of answer-order bias, the performance is better in ten of twelve cases when students see the correct answer earlier in the list of four choices.

This guide is separated into first-term and second-term general chemistry material. Each section contains 8 chapters of material that also aligns to most general chemistry textbooks for a seamless addition to study materials for students. Each chapter is designed with an introductory section of the material including common representations and where to find this material in a textbook. The second section provides worked examples of typical, multiple choice questions including how the correct answer is determined as well as how the incorrect answers were determined. Also included for each study problem is a listing of the corresponding practice questions that use that concept. The final section is a series of practice problems to test the concepts collectively. The key is provided on a separate page for all study and practice problems.

The moment is right for critical reflection on what has been assumed to be a core part of schooling. In Ungrading, fifteen educators write about their diverse experiences going gradeless. Some contributors are new to the practice and some have been engaging in it for decades. Some are in humanities and social sciences, some in STEM fields. Some are in higher education, but some are the K-12 pioneers who led the way. Based on rigorous and replicated research, this is the first book to show why and how faculty who wish to focus on learning, rather than sorting or judging, might proceed. It includes honest reflection on what makes ungrading challenging, and testimonials about what makes it transformative. CONTRIBUTORS: Aaron Blackwelder Susan D. Organic chemistry courses are often difficult for students, and instructors are constantly seeking new ways to improve student learning. This volume details active learning strategies implemented at a variety of institutional settings, including small and large; private and public; liberal arts and technical, and highly selective and open-enrollment institutions. Readers will find detailed descriptions of methods and materials, in addition to data supporting analyses of the effectiveness of reported pedagogies.

Astrochemistry by Olivia Harper Wilkins and Geoffrey Blake (Caltech) takes scientists on a tour of the molecular universe starting with the advent of matter about 13.8 billion years ago before traversing through the interstellar medium and the formation of stars and planets - and the chemistry that evolves alongside them. This primer contains video interviews with prominent insiders including: - Dr. Murthy S. Gudipati, Senior Research Scientist, Jet Propulsion Laboratory, California Institute of Technology - Dr. Karin Öberg, Professor of Astronomy, Center for Astrophysics | Harvard & Smithsonian, Harvard University - Dr. Ewine van Dishoeck, Professor of Molecular Astrophysics, Leiden Observatory, University of Leiden - Dr. Ilse Cleeves, Assistant Professor of Astronomy, Departments of Astronomy and Chemistry, University of Virginia - Dr. Kyle Crabtree, Assistant Professor of Chemistry, University of California, Davis.

At the interface between chemistry and mathematics, this book brings together research on the use mathematics in the context of undergraduate chemistry courses. These university-level studies also support national efforts expressed in the Next Generation Science Standards regarding the importance of skills, such as quantitative reasoning and interpreting data. Curated by award-winning leaders in the field, this book is useful for instructors in chemistry, mathematics, and physics at the secondary and university levels.
