

Activity Series Pre Lab Answers 15

Yeah, reviewing a ebook activity series pre lab answers 15 could be credited with your close contacts listings. This is just one of the solutions for you to be successful. As understood, achievement does not recommend that you have astounding points.

Comprehending as well as treaty even more than additional will find the money for each success. neighboring to, the message as skillfully as acuteness of this activity series pre lab answers 15 can be taken as well as picked to act.

The purpose of the lab was to find which metal is the most reactive and which metal is the least reactive. It was known before the experiment that the metals used in the experiment are placed in the activity series from most active to least active as follows: magnesium, aluminum, zinc, and copper. The hypotheses formed were that zinc nitrate would react with aluminum and magnesium; aluminum nitrate would react with magnesium; copper nitrate would react with zinc, magnesium, and aluminum; and ...

Activity Series: Single Displacement Reactions Prelab: Complete the prelab given in your lab manual for this experiment (page 64-65). **Report:** You will turn in the data sheets given below. Carefully read the instructions given in each section. **Postlab:** You will complete the postlab assignment provided in your lab manual (page 66).

The Activity Series. Single-replacement reactions only occur when the element that is doing the replacing is more reactive than the element that is being replaced. Therefore, it is useful to have a list of elements in order of their relative reactivities. The activity series is a list of elements in decreasing order of their reactivity. Since metals replace other metals, while nonmetals replace other nonmetals, they each have a separate activity series.

~~When an atom gains electrons, it is reduced. Metals higher on the activity series are more likely to react relative to those lower on the activity series. The activity series can be used to predict products of reactions, and to predict if a reaction will even occur. In this experiment, different metals were tested for their reactivity. It was recorded if a reaction occurred or not, so that an activity series could be created. Data & Results~~
