Airy Functions and Applications to Physics

The Airy functions $Ai(x)$ and $Bi(x)$ are linearly independent solutions of the differential equation $d^2 y/dx^2 = xy$. For real x , $Ai(x)$ can be written as $1/\pi$ times the integral from zero to infinity of the cosine of $xt+(t^3/3)$, with respect to t . It is convenient to define two more functions $Gi(x)$ and $Hi(x)$, the inhomogeneous Airy or Scorer functions.

Airy Functions and Applications to Physics. Olivier Vallee, manuel Soares. The use of special functions, and in particular Airy functions, is rather common in physics. The reason may be found in the need, and even in the necessity, to express a physical phenomenon in terms of an effective and comprehensive analytical form for the whole scientific community.

The Airy function $Ai(x)$ oscillates on the real negative axis, where $2/4 \cdot 21 x^{3/4} \sim x^{3/4}$, $S^1 S(1-3)$ And it has a discrete set of zeroes, while It decays exponential fast on the real positive axis, where $2/4 \cdot ex \sim 2x S(1-4)$ The Airy function has many application in physics (optics, quantum mechanics, electromagnetic, radiative transfer) [5].

In the physical sciences, the Airy function (or Airy function of the first kind) $Ai(x)$ is a special function named after the British astronomer George Biddell Airy (1801–1892). The function $Ai(x)$ and the related function $Bi(x)$, are linearly independent solutions to the differential equation $y'' = x y$, known as the Airy equation or the Stokes equation. This is the simplest second-order linear ...

Airy functions are applied in many branches of both classical and quantum physics. The function $Ai(x)$ first appears as an integral in two articles by G.B. Airy on the intensity of light in the neighborhood of a caustic (Airy (1838, 1849)). Details of the Airy theory are given in van de Hulst in the
