Amazon.com: Books

Although not quite as complete as the later edition, or as convenient as the Aldrich CD or other commercial databases, it is an affordable way to get a lot of NMR spectra of the most common compounds. Having real spectra is a useful accessory to spectrum prediction programs, which are a convenient first-line but often inaccurate.

NMRShiftDB v 1.0 is an open access, open submission, open source NMR database that allows for searching for (sub-)spectra, (sub-)structures and other properties (chemical names, measurement conditions, keywords), and last not least ^{13}C spectrum prediction based on the database content. Currently, the database contains about 5300 structures and about 6000 assigned spectra.
