Throughout his life Lewis Fry Richardson made many inspirational contributions to various disciplines. He is best known for his wealth of important work on meteorology, and his ground-breaking application of mathematics to the causes of war. His field of interest was in no way limited to these and various aspects of psychology and mathematical approximation also benefited from his unique approach. Collected in this second volume are many of Richardson's papers covering the behavioural sciences.

This dictionary includes a number of mathematical, statistical and computing terms and their definitions to assist geoscientists and provide guidance on the methods and terminology encountered in the literature. Each technical term used in the explanations can be found in the dictionary which also includes explanations of basics, such as trigonometric functions and logarithms. There are also citations from the relevant literature to show the term's first use in mathematics, statistics, etc. and its subsequent usage in geosciences.

The 39th edition of edition of the SIPRI Yearbook analyses developments in 2007 in security and conflicts; military spending and armaments; non-proliferation; arms control; and disarmament. This major publication will also contain annexes on arms control and disarmament agreements, and a chronology of security and arms-control related events.
