Heat rash - Symptoms and causes - Mayo Clinic

Unless you're using a liquid-cooled rig (which most regular users aren't), air flow is one of the most common cooling systems. All your components rely on your case being able to draw in cooler air from the outside and expel hot air that builds up in the case. How the main airflow works in your PC really depends on its design. On basic PCs, you might just see a single exhaust fan with vents on the side or front.

How to Tell If Your Computer Is Overheating and What to Do ...

Li-Ion batteries are generally safe, but malfunctions do sometimes occur. A hot battery could also be in need of replacement. Bottom of the phone. See if the bottom of the phone gets hot when
