When the air conditioner in your 2008 Audi A6 starts blowing hot air, you likely have a freon leak. Recharging the freon in your AC system is an inexpensive and easy first step to restoring the cooling capacity of your A/C system. Most refrigerants include a leak sealer that will seal small leaks in addition to filling the R134a refrigerant.

Using an air compressor machine, blow out the valve with compressed air. About 50psi of sustained air pressure should do the trick. When complete, place the drainage duct back down and secure with bolts. Place the carpet and trim back over the area and replace the side panel back into its original position.
