Emission control system, in automobiles, means employed to limit the discharge of noxious gases from the internal-combustion engine and other components. There are three main sources of these gases: the engine exhaust, the crankcase, and the fuel tank and carburetor. The exhaust pipe discharges burned and unburned hydrocarbons, carbon monoxide, oxides of nitrogen and sulfur, and traces of various acids, alcohols, and phenols.

26th Aug 2020. Reducing your car's emissions is good for the environment and a cleaner car will also offer better performance, increased fuel economy and be cheaper to run. While every car made in or after 1992 will have a Euro emissions standard, which classifies what emissions it produces in what quantities, these are based on lab tests and the actual 'real-world' driving emissions can vary significantly.
