Blood Cells: An Atlas of Morphology with Clinical Relevance. Dr Gene L. Gulati, world-renowned educator and frequent contributor to Laboratory Medicine and other prestigious scientific journals, along with his colleague Dr. Jaime Caro, have brought together a comprehensive and completely practical color atlas of the characteristics and clinical relevance of individual normal and abnormal cells, and the morphologic findings associated with various clinical conditions.

~~Blood Cells: An Atlas of Morphology with Clinical Relevance~~

Endothelium is a single layer of squamous endothelial cells that line the interior surface of blood vessels, and lymphatic vessels. The endothelium forms an interface between circulating blood or lymph in the lumen and the rest of the vessel wall. Endothelial cells form the barrier between vessels and tissue and control the flow of substances and fluid into and out of a tissue.
