This book provides a highlypractical treatment of Glancing Angle Deposition (GLAD), a thinfilm fabrication technology optimized to produce precisenanostructures from a wide range of materials. GLAD providesan elegant method for fabricating arrays of nanoscale helices,chevrons, columns, and other porous thin film architectures usingphysical vapour deposition processes such as sputtering orevaporation. The book gathers existing procedures,methodologies, and experimental designs into a single, cohesivevolume which will be useful both as a ready reference for those inthe field and as a definitive guide for those entering it. Itcovers: Development and description of GLAD techniques fornanostructuring thin films Properties and characterization of nanohelices, nanoposts, andother porous films Design and engineering of optical GLAD films includingfabrication and testing, and chiral films Post-deposition processing and integration to optimize filmbehaviour and structure Deposition systems and requirements for GLAD fabrication A patent survey, extensiverelevant literature, and a survey of GLAD's wide range ofmaterial properties and diverse applications.

Seven years have passed since the publication of the previous edition of this book. During that time, sensor technologies have made a remarkable leap forward. The sensitivity of the sensors became higher, the dimensions became smaller, the sel- tivity became better, and the prices became lower. What have not changed are the fundamental principles of the sensor design. They are still governed by the laws of Nature. Arguably one of the greatest geniuses who ever lived, Leonardo Da Vinci, had his own peculiar way of praying. He was saying, "Oh Lord, thanks for Thou do not violate your own laws. " It is comforting indeed that the laws of Nature do not change as time goes by; it is just our appreciation of them that is being re?ned. Thus, this new edition examines the same good old laws of Nature that are employed in the designs of various sensors. This has not changed much since the previous edition. Yet, the sections that describe the practical designs are revised substantially. Recent ideas and developments have been added, and less important and nonessential designs were dropped. Probably the most dramatic recent progress in the sensor technologies relates to wide use of MEMS and MEOMS (micro-electro-mechanical systems and micro-electro-opto-mechanical systems). These are examined in this new edition with greater detail. This book is about devices commonly called sensors. The invention of a - croprocessor has brought highly sophisticated instruments into our everyday lives.

"Thirtysomething Nicky Fowler has it all-- a rewarding career, a loving husband and the perfect home. But when she and her husband suffer a complicated tragedy, the strain of two people dealing with an impossible situation in different ways breaks up their marriage. Emotionally lost, Nicky travels to Kenya to volunteer at an orphanage. Amidst the violence and abject poverty, Nicky discovers the one thing that keeps Kenyans moving forward: hope. Over steaming mugs of chai, the country's signature drink, Nicky opens up to her host mother, Mama Bu, and finds understanding, love and strength. And with that strength, Nicky realizes what she needs to do to save the endangered children she's grown to love. Based on a true story" -- p. [4] of cover.
