to get involved with the material, such as Your Turn exercises and Apply It vignettes that encourage active participation. The MyMathLab(r) course for the text provides additional learning resources for students, such as video tutorials, algebra help, step-by-step examples, and graphing calculator help. The course also features many more assignable exercises than the previous edition.

Calculus with Applications, Second Edition, provides the mathematical background for students majoring in business, management, or life and social sciences. Throughout the text, Karl Smith emphasizes and enhances students' understanding of the modeling

process and how mathematics is used in real world applications. Smith believes that model building is one of the most important skills that students taking a college mathematics course should learn. In his text he teaches modeling as a gradual process, with small steps and realistic examples. Each chapter concludes with "A Modeling Application" section. These open-ended problems require a mathematical model-building approach for their development, and provide students with either too much information, or leave something out. Thus, students develop skill in knowing what information to include, and what information to delete.

modern text that is guided by four basic principles: The Rule of Four, technology, the Way of Archimedes, and an exploratory teaching method. Where appropriate, each topic is presented graphically, numerically, algebraically, and verbally, helping students gain a richer, deeper understanding of the material. A pronounced emphasis in the text on technology, whether graphing calculators or computers, permits instructors to spend more time teaching concepts. Additionally, applications play a central role in the text and are woven into the development of the material. More than 500 referenced exercises and hundreds of data sets contained in the text make this text useful and practical for students. Most importantly, this text
