Seminar Workbook The Cardiovascular System - Cardiac Function All tissues need a steady supply of blood to provide them with nutrients and oxygen. This continuous blood supply helps to maintain tissue homeostasis in terms of delivering nutrients and taking away toxins and wastes. This homeostasis can only be maintained if blood keeps moving.

The Cardiovascular System - Teesside University
The cardiovascular system includes a muscular pump equipped with one-way valves and a system of large and small "plumbing" tubes within which the blood travels. (We discussed blood, the sub- stance transported, in Chapter 10.) Here we will consider the heart (the pump) and the blood ves- sels (the "plumbing").

First, read the KidsHealth.org articles about blood and the cardiovascular system. Then, in an essay, explain the path blood takes and what it does as it travels throughout the cardiovascular system. Make sure to explain the roles of the heart and lungs. Then list things people can do to help keep the cardiovascular system healthy.

Teacher's Guide: Cardiovascular System
(Grades 6 to 8)

The cardiovascular system is sometimes called, simply, the circulatory system. It consists of the heart, which is a muscular pumping device, and a closed system of vessels called arteries, veins, and capillaries. As the name implies, blood contained in the circulatory system is pumped by the heart around a closed circle or circuit of vessels as it

Chapter 33 - Assessment of the Cardiovascular System ...

The heart is the key organ of the cardiovascular system - the body's transport system for blood. A muscle that contracts rhythmically and autonomously, it works in conjunction with an extensive network of blood vessels running throughout the body. Basically, the heart is a pump ensuring the continuous circulation of blood in the body.
