Cats have highly specialized teeth for the killing of prey and the tearing of meat. The premolar and first molar, together the carnassial pair are located on each side of the mouth. These teeth efficiently function to shear meat like a pair of scissors. While this is present in canids, it is highly developed in felines.

Cat anatomy - Wikipedia, the free encyclopedia

Cats have seven cervical vertebrae like almost all mammals, thirteen thoracic vertebrae (humans have twelve), seven lumbar vertebrae (humans have five), three sacral vertebrae (humans have five because of their bipedal posture), and, except for Manx cats and other shorter tailed cats, twenty-two or twenty-three caudal vertebrae (humans have three to five, fused into an internal coccyx). The extra lumbar and thoracic vertebrae account for the cat's enhanced spinal mobility and flexibility ...

Cat anatomy - WikiMili, The Best Wikipedia Reader

Cats' extra vertebrae (32 to our 24) and flexible backbones help get paws tucked under, with front paws poised to protect his face. Parachute-like, a cat's body relaxes and spreads for landing. But the distance of a cat's fall determines how well he lands or how badly he is injured when his legs absorb the shock.

10 Crazy Cat Anatomy Facts - Pet Central by Chewy

A cat's skeleton is made up of many different bones: 250 altogether. This number may vary, as some cats have longer tails than others, and therefore more vertebrae. The skeleton holds the cat's body together and allows it to move around.
