Arrangements of curves constitute fundamental structures that have been intensively studied in computational geometry. Arrangements have numerous applications in a wide range of areas -- examples include geographic information systems, robot motion planning, statistics, computer-assisted surgery and molecular biology. Implementing robust algorithms for arrangements is a notoriously difficult task, and the CGAL arrangements package is the first robust, comprehensive, generic and efficient implementation of data structures and algorithms for arrangements of curves.

Arrangements are ubiquitous in the computational-geometry literature and have many applications; see, e.g.,... The curves in can intersect each other (a single curve may also be self-intersecting or may be comprised of several disconnected branches) and are not necessarily -monotone. W

CGAL 5.1.1 - 2D Arrangements: User Manual

We present many applications of arrangements to problems in motion planning, visualization, range searching, molecular modeling, and geometric optimization. Some results involving planar arrangements of arcs have been presented in Chapter 1 of this Handbook, and are extended in this chapter to higher dimensions.
