The Ford FE (Ford Edsel) engine is one of the most popular engines Ford ever produced, and it powered most Ford and Mercury cars and trucks from the late 1950s to the mid-1970s. For many of the later years, FE engines were used primarily in truck applications. However, the FE engine is experiencing a renaissance; it is now popular in high-performance street, strip, muscle cars, and even high-performance trucks. While high-performance build-up principles and techniques are discussed for all engines, author Barry Raboutnick focuses on the max-performance build-up for the most popular engines: the 390 and 428. With the high-performance revival for FE engines, a variety of builds are being performed from stock blocks with mild head and cam work to complete aftermarket engines with aluminum blocks, high-flow heads, and aggressive roller cams. How to Build Max-Performance Ford FE Engines shows you how to select the ideal pistons, connecting rods, and crankshafts to achieve horsepower requirements for all applications. The chapter on blocks discusses the strengths and weaknesses of each particular block considered. The book also examines head, valvetrain, and cam options that are best suited for individual performance goals. Also covered are the best-flowing heads, rocker-arm options, lifters, and pushrods. In addition, this volume covers port sizing, cam lift, and the best rocker-arm geometry. The FE engines are an excellent platform for stroking, and this book provides an insightful, easy-to-follow approach for selecting the right crank, connecting rods, pistons, and making the necessary block modifications. This is the book that Ford FE fans have been looking for.

You will move off the ground and sleep cozy, comfortable and secure in your own car. Like in an RV or a caravan you are safe from the elements and sleep warm, dry and locked away. SIMPLE INSTRUCTIONS TO BUILD YOUR OWN MINICAMPER ! I managed this conversion all by myself in my garage with simple tools. All I needed was a drilling machine, a jigsaw, a hole saw, screwdrivers and sanding paper. I am not an expert of any kind, just a simple guy who did this with good planning, patience and some courage to try this DIY- conversion. With this book you too can transform your station wagon, combi vehicle or minivan into a minicamper. THE WHOLE CONVERSION IS BUILD ON A BUDGET ! For the whole project I spent less than 500 \$. I used very high quality materials. The most expensive part was the wood. If you use simple wood, this conversion can be done for less than 250 \$. All materials can be bought at your local hardware store or can be ordered even cheaper on the internet. I listed all the material, down to the last screw and nut. All bolts, screws, nuts and brackets are listed here. Converting a car into a campervan does not cost much and this manual shows you exactly how. UNIVERSAL APPLICATION FOR ALL KIND OF CARS ! The basis for my conversion is a VW Caddy (2012). But this construction is so simple that you can adjust it to all kinds of cars with suitable inner dimensions. Very suitable are: Citroen Berlingo, Renault Kangoo, Fiat Doblo, Skoda Roomster, Skoda Yeti, Mercedes Citan, Ford Transit, Peugeot Partner, Opel Combo or Dacia Dokker, since they have some additional headspace. But with simple adjustments you can transform any station car or combi into a rolling bed, just insert your measurements into the material list. This way you can get the most out of your car.
