Organizations turn to multistakeholder partnerships (MSPs) to meet challenges that they cannot handle alone. By tapping the resources of diverse stakeholders, MSPs develop the capability to address complex issues and problems, such as health care delivery, poverty, human rights, watershed management, education, sustainability, and innovation. This book provides a comprehensive understanding of MSPs, why they are needed, the challenges partners face in working together and how to design them effectively. Through the process of collaboration partners combine their differing strengths, vantage points and expertise to craft innovative responses to pressing societal concerns. The book offers valuable advice for leaders about how to design and scale up effective partnerships and how to address potential obstacles that partners may face. Drawing on three comprehensive cases and countless shorter examples from around the world, the book offers both practical advice for organization embarking on an MSP as well as a theoretical understanding of how partnerships function. Using an

Download Free Collaborating For Our Future Multistakeholder Partnerships For Solving Complex Problems

institutional theory lens, it explains how partnerships can effect change in institutional fields by reducing turbulence and negotiating a common set of norms and routines to govern partners' future interactions within the field of concern.

The severity of interconnected socio-economic and environmental impacts on landscapes and people across Africa are exacerbated as a result of land degradation, conflict, poor governance, competition for land and inequality, and exacerbated by climate change. In pursuing pathways towards a more resilient future, collaborative and multi-stakeholder governance and management of landscapes have been promoted by government agencies, NGOs and conservation organisations as a possible solution. However, there is no single way to achieve effective collaboration, and different landscape projects have experimented with different entry points and engagement processes. Grounded in partnerships amongst researchers, practitioners and development partners with expertise in landscape governance and management in Africa, this book describes and collates key lessons from practice for supporting more resilient and equitable landscapes.

The guide is for those directly involved in MSPs to provide both the conceptual foundations and practical tools that underpin successful partnerships. This work has been inspired by the motivation and passion that comes when people dare to "walk in each other's shoes" to find new paths toward shared ambitions for the future.

Whether you're working on homelessness or building a rural farm cooperative, the Collaboration Handbook tells you what to expect and how to meet challenges in a way that strengthens your group and the results you're after. Written by Michael Winer and Karen Ray, nationally recognized consultants in collaboration and organizational development, the Collaboration Handbook takes you step-by-step through the entire process, showing you how to know if collaboration is the best way to accomplish your goals, how to get started and keep up the momentum, whether your collaboration has the necessary ingredients to succeed, how to manage the four stages of collaboration, and when it makes sense to test the waters with a pilot project. Features a case study from start to finish, worksheets, and sidebars with helpful tips.

A guide to collaborative impact for leaders in industry, government, and social change networks Our world is facing unsustainable global trends—from climate change and water scarcity to energy insecurity, unfair labor practices, and growing inequality. Tackling these crises effectively requires a new form of leadership—a collective one. But, in a world of many silos, how do we get people to work together toward a common goal? That is one of the most important questions facing sustainability and social-change professionals around the world, and it is a question that Petra Kuenkel answers in *The Art of Leading Collectively*. Readers learn how to tackle system change for sustainable development, reimagine leadership as a collaborative endeavor, retrain leaders to work collectively, and manage diverse groups through a change process that has sustainability as a guiding focus. Drawing upon two decades of pioneering, internationally recognized work orchestrating multi-stakeholder initiatives, Kuenkel presents her chief tool, the Collective Leadership Compass, and shows others how to use it with large groups of diverse stakeholders to solve complex, urgent problems—particularly those that enmesh business activities, governance, human needs, and environmental impacts. The book offers many examples of collective leadership efforts involving corporate, public, and nonprofit sectors around the world. Readers learn about the processes that led to a sustainable textile alliance and set standards for sustainable cocoa and coffee production and trade, as well as those that helped nations rebound from war, develop sustainable

Download Free Collaborating For Our Future Multistakeholder Partnerships For Solving Complex Problems

infrastructure, and tackle resource conflicts with global businesses, to name a few. Kuenkel provides a clear roadmap for leaders from multinational companies involved in partnerships, international organizations engaged in cooperative development, public agencies, and interest groups—as well as for citizens seeking solutions to social and sustainability challenge

The world's governments are overwhelmed with climate change, war and unrest, the global financial crisis and poverty but there is a promising invention in Global Action Networks (GANs). GANs mobilize resources, bridge divides and promote the long-term deep change and innovation work that is needed to address the global challenges.

In the context of the world's pressing sustainability challenges this new Report to the Club of Rome presents a novel approach to navigating collaborative change in partnerships between governments, research institutions, corporations and civil society activists. With reference to the 17 Sustainable Development Goals and the Planetary Boundaries it introduces the theory and practice of Collective Stewardship as a management tool that respects the integrity of human and natural systems. Drawing on the work of transdisciplinary scientific scholars and seasoned sustainability practitioners, it shows how transformative change can be built on life's inherent tendency to generate patterns of vitality and resilience. This ground-breaking monograph shows workable pathways to stewarding patterns of aliveness in social and ecological systems at all levels of the global society. As a highly regarded author and expert in collective leadership, Petra Kuenkel inspires academics and practitioners alike to explore new routes towards co-creating responsible futures in the era of the Anthropocene, where the human footprint has begun to change the course of planetary evolution. She invites decision-makers, researchers, planners and social activists to become stewards of systems patterns, enhance their collaborative competencies and guide life-enhancing socio-ecological interaction at scale. The conceptual architecture the author elaborates builds transformation literacy and boils down to a practical guidance for planning and implementing interventions across all sectors of society. It helps bring about change through a deliberate combination of enlivening narratives, empowering metrics, enabling processes, multi-level governance, guiding regulations, and life-supporting innovation. This comprehensive book sets a new direction in the field of sustainability transformations and will become a foundation for planning collective action and achieving impact at scale.

Veteran mediator Barbara Gray presents an innovative approach to successfully mediating multi-party disputes. A superb resource for managers, public officials and others working to solve complex problems such as labor disputes, disposal of toxic wastes, racial integration, and the use of biotechnology.

Reimagining our global economy so it becomes more sustainable and prosperous for all Our global economic system is broken. But we can replace the current picture of global upheaval, unsustainability, and uncertainty with one of an economy that works for all people, and the planet. First, we must eliminate rising income inequality within societies where productivity and wage growth has slowed. Second, we must reduce the dampening effect of monopoly market power wielded by large corporations on innovation and productivity gains. And finally, the short-sighted exploitation of natural resources that is corroding the environment and affecting the lives of many for the worse must end. The debate over the causes of the broken economy—laissez-faire government, poorly managed globalization, the rise of technology in favor of the

Download Free Collaborating For Our Future Multistakeholder Partnerships For Solving Complex Problems

few, or yet another reason—is wide open. Stakeholder Capitalism: A Global Economy that Works for Progress, People and Planet argues convincingly that if we don't start with recognizing the true shape of our problems, our current system will continue to fail us. To help us see our challenges more clearly, Schwab—the Founder and Executive Chairman of the World Economic Forum—looks for the real causes of our system's shortcomings, and for solutions in best practices from around the world in places as diverse as China, Denmark, Ethiopia, Germany, Indonesia, New Zealand, and Singapore. And in doing so, Schwab finds emerging examples of new ways of doing things that provide grounds for hope, including: Individual agency: how countries and policies can make a difference against large external forces A clearly defined social contract: agreement on shared values and goals allows government, business, and individuals to produce the most optimal outcomes Planning for future generations: short-sighted presentism harms our shared future, and that of those yet to be born Better measures of economic success: move beyond a myopic focus on GDP to more complete, human-scaled measures of societal flourishing By accurately describing our real situation, Stakeholder Capitalism is able to pinpoint achievable ways to deal with our problems. Chapter by chapter, Professor Schwab shows us that there are ways for everyone at all levels of society to reshape the broken pieces of the global economy and—country by country, company by company, and citizen by citizen—glue them back together in a way that benefits us all.

The problems related to the process of industrialisation such as biodiversity depletion, climate change and a worsening of health and living conditions, especially but not only in developing countries, intensify. Therefore, there is an increasing need to search for integrated solutions to make development more sustainable. The United Nations has acknowledged the problem and approved the “2030 Agenda for Sustainable Development”. On 1st January 2016, the 17 Sustainable Development Goals (SDGs) of the Agenda officially came into force. These goals cover the three dimensions of sustainable development: economic growth, social inclusion and environmental protection. The Encyclopedia of the UN Sustainable Development Goals comprehensively addresses the SDGs in an integrated way. The Encyclopedia encompasses 17 volumes, each one devoted to one of the 17 SDGs. This volume addresses SDG 17, namely "Strengthen the means of implementation and revitalize the global partnership for sustainable development" and contains the description of a range of terms, which allows a better understanding and fosters knowledge. The approval of the SDGs by the 194 countries of the UN General Assembly implies that issues such as combating climate change; distributing resources fairly; providing security and protection; generating employment; and ensuring quality health care and education need the concerted efforts of everyone. SDG 17 seeks to dismantle structures and procedures built on inequality of access and develop strategies that ensure collaboration and sharing of resources and opportunities. The topics covered concern finance, technology, capacity-building, trade and systemic issues: Domestic resource mobilization Domestic capacity for tax and other revenue collection Long-term debt sustainability for developing countries Debt financing, debt relief, debt restructuring Global technology facilitation mechanism Technology, bank and science, technology and innovation capacity-building mechanism Enhanced information and communications technology Universal, rules-based, open, non-discriminatory and equitable multilateral trading system under WTO Increased exports of developing countries Global macroeconomic stability Policy coordination and policy coherence Promotion of effective public, public-private and civil society partnerships Editorial Board Carolina Collaro, Sonja Rewhorn, Elena Shabliy, Monica Thiel, Marco Tortora, Tony Wall
