In the future residential biomass combustion and transport will be important sources for emissions to air of black carbon (BC), as will agriculture and waste management for emissions of methane (CH₄). Measures to abate emissions of Short-Lived Climate Pollutants (SLCP) are to varying degrees already in place in the Nordic countries. To reduce emissions beyond current emission projections, additional measures are required. Both technical measures, such as improved technologies, and non-technical measures, such as promoting behavioral changes favoring reduced emissions are discussed in this report. The overall objective of this project is to improve the Nordic emission inventories of Short Lived Climate Pollutants. This report presents results from the third and final phase of the project, an assessment of efficient measures to reduce emissions of Short-Lived Climate Pollutants (SLCP) in the Nordic countries.

ought's A-7 Corsair II served the U.S. Navy for over over two decades, and flew with distinction during the Vietnam conflict. The subsonic A-7 was based on Chance Vought's supersonic F-8 Crusader. It boasted a heads-up display, an inertial navigation system, and other innovations. The plane entered service

in 1966, and served in Vietnam in late 1967. Its performance was impressive. The USS Ranger's VA-147 flew over 1,400 sorties with the loss of only one aircraft. The Air Force purchased an advanced version, the A-7D, equipped with a more powerful engine. The plane later flew missions over Lebanon, Libya, Grenada, Panama, and Iraq. The last planes in U.S inventory were retired in 1991. Originally printed by the U.S. Navy and Vought, this handbook for the A-7 provides a fascinating glimpse inside the cockpit of this famous aircraft. Originally classified "restricted", the manual was recently declassified and is here reprinted in book form.
