Through a regional focus on Bihar between the 1760s and 1880s, 'Communication and Colonialism in Eastern India' reveals the shifting and contradictory nature of the colonial state's policies and discourses on communication. The volume explores the changing relationship between trade, transport and mobility in India, as evident in the trading and mercantile networks operating at various scales of the economy. Of crucial importance to this study are the ways in which knowledge about roads and routes was collected through practices of travel, tours, surveys, and map-making, all of which benefited the state in its attempts to structure a regime that would regulate 'undesirable' forms of mobility.

In the era of instant global communication, medicine is an international discipline characterized by a wide range of patient referral systems, world-wide discussion of clinical and research findings, and an explosion in the medical literature. Perhaps no field has progressed more than cardiology in the past few years. *Contemporary Concepts in Cardiology* has been conceived as a supplement to the classic cardiology textbooks for the use of practicing physicians, cardiologists-in-training, medical students, and research investigators. This volume focuses on associations between refinements in the understanding of disease and clinical applications. The material is presented in a way that limns the latest advances and focuses thinking towards future developments in cardiology. The Editors have assembled a respected international panel of contributors so that each chapter is authored by a well-known specialist in his or her field. Every attempt was made to avoid the fragmentation which often characterizes the digest approach. Because the constant flow of information makes it nearly impossible to construct a timely book on advances in cardiology, the chapters in this volume describe the current concepts in cardiology and their underlying rationale, rather than attempting a comprehensive review of the most recent papers in each discipline.

The clinician nowadays is faced with a wide and often confusing choice of new instruments and methods of ablation. There are few, if any, comparative studies involving the various new tools, nor is there any compilation of data on any specific new discovery. It is timely to

provide a review of available data on the progress of new technology in order to enhance our knowledge and to concentrate our efforts into the development of an ultimate practical and yet effective methodology. The purpose of this publication is to provide a forum in which the authors can present their experience, even if only in its preliminary stages, in the respective field or technology. Various technological advancements in mapping and ablation as well as the improved understanding of the pathophysiology of the various arrhythmias are presented. The authors are selected for their interest and expertise on the subject. Each topic is presented in a concise form and with relevance to the development of new technology. The authors are encouraged to provide their opinion on the issues to stimulate further discussion and investigation.

Core concepts in cardiac surgery has been developed to make it an invaluable textbook for the professional cardiac and cardiothoracic surgeon, covering both topical issues and updates in cardiac surgery. This provides the practising cardiac surgeon with current updates in the field, and controversial issues that affect everyday practice. Written by an international team of renowned cardiac surgeons, each topic is split into a review of the current literature and then important technical details. Their wealth of professional experience has been distilled into tips and common pitfalls in practice throughout the book. Extensively illustrated with full-colour photographs and artwork to facilitate understanding of complex procedures, Core concepts in cardiac surgery is also available on a companion website, to allow the authors to update the text regularly to reflect developments in the discipline.

This critical and empirically based volume examines the multiple existing Nordic models, providing analytically innovative attention to the multitude of circulating ideas, images and experiences referred to as "Nordic". It addresses related paradoxes as well as patterns of circulation, claims about the exceptionality of Nordic models, and the diffusion and impact of Nordic experiences and ideas. Providing original case studies, the book further examines how the Nordic models have been constructed, transformed and circulated in time and in space. It investigates the actors and channels that have been involved in circulating models: journalists and media, bureaucrats and policy-makers, international organizations, national politicians and institutions, scholars, public diplomats and analyses where and why models have travelled. Finally, the book shows that Nordic models, perspectives, or ideas do not always originate in the Nordic region, nor do they always develop as deliberate efforts to promote Nordic interests. This book will be of key interest to Nordic and Scandinavian studies, European studies, and more broadly to history, sociology, political science, marketing, social policy, organizational theory and public management.
