There are many areas in reliability engineering, for example: reliability data analysis with the time-domain probabilistic models of reliability, failure rate, and hazard rate by using time as the random variable to address the probability of failure as a function of mission time (e.g., analysis with the Weibull distribution); the stress-strength probabilistic interference model by ...

Site reliability engineering (SRE) is a software engineering approach to IT operations. SRE teams use software as a tool to manage systems, solve problems, and automate operations tasks. SRE takes the tasks that have historically been done by operations teams, often manually, and instead gives them to engineers or ops teams who use software and automation to solve problems and manage production systems.
