Confronting Climate Uncertainty in
Water Resources Planning and Project
Design describes an approach to

Online Library

Contemporary Strategy

Facing two fundamental and unavoidable issues brought about by climate change uncertainty in water resources planning and project design. The first is a risk assessment problem. The second relates to risk management. This book provides background on the risks relevant in

Online Library

water systems planning, the different approaches to scenario definition in water system planning, and an introduction to the decision-scaling methodology upon which the decision tree is based. The decision tree is described as a scientifically defensible, repeatable, direct and

Online Library

clear method for demonstrating the robustness of a project to climate change. While applicable to all water resources projects, it allocates effort to projects in a way that is consistent with their potential sensitivity to climate risk. The process was designed to be hierarchical, with

Alcohol use disorder (AUD) is a major public health problem in the United States. The estimated 12-month and lifetime prevalence values for AUD

Online Library

Contemporary Strategy

are 13.9% and 29.1%, respectively, with approximately half of individuals with lifetime AUD having a severe disorder. AUD and its sequelae also account for significant excess mortality and cost the United States more than \$200 billion annually. Despite its high prevalence and

numerous negative consequences, AUD remains undertreated. In fact, fewer than 1 in 10 individuals in the United States with a 12-month diagnosis of AUD receive any treatment. Nevertheless, effective and evidence-based interventions are available, and treatment is associated

with reductions in the risk of relapse and AUD-associated mortality. The American Psychiatric Association Practice Guideline for the Pharmacological Treatment of Patients With Alcohol Use Disorder seeks to reduce these substantial psychosocial and public health

consequences of AUD for millions of affected individuals. The guideline focuses specifically on evidence-based pharmacological treatments for AUD in outpatient settings and includes additional information on assessment and treatment planning, which are an integral part of using

pharmacotherapy to treat AUD. In addition to reviewing the available evidence on the use of AUD pharmacotherapy, the guideline offers clear, concise, and actionable recommendation statements, each of which is given a rating that reflects the level of confidence that potential

benefits of an intervention outweigh potential harms. The guideline provides guidance on implementing these recommendations into clinical practice, with the goal of improving quality of care and treatment outcomes of AUD.

Scenario Planning Test Bank

Scenario planning should be one of the Pentagon's most important tools for developing strategy for an uncertain future. However, the formalized joint scenario planning process to support strategy and force development-Support for Strategic Analysis-has faced many challenges

over the past 2 decades, and has ultimately proven less influential than intended on strategic decision-making. Explaining why is the main purpose of this monograph. It argues that scenario analysis has been most effective in supporting capability and program development, while it has

Online Library

Contemporary Strategy

fallen short in shaping strategy and force structure. The reasons for this are numerous and are rooted in intrinsic, structural characteristics of decision-making in large organizations. The monograph concludes with several recommendations for rejuvenating

scenario planning in the Pentagon.
