However, these materials only reduce the housing radiated noise and do not reduce motor or drive noise. Typical reduction levels are 8 to 15 dBA. Jackets can also be installed to the ducting to minimize breakout noise – particularly in applications with long, uninterrupted runs of straight ducting.

Non-Specialists Alike Bad acoustics in buildings is a nuisance that is not dealt with easily. The problem applies just as much to open-plan offices and restaurants and to production facilities and transportation stations as it does to performance halls, not to mention homes. It does not merely affect oral communication or enjoyment of music but has quite profound consequences on well-being. Gives Guidance on What to Expect from Design Teams and Contractors Building Acoustics is devoted to practical building and room acoustics, illustrated by numerous examples. It introduces the basics for the different specialists in a design team and for the client and sets out the issues for shared consideration. It guides them in the drawing up of sensible acoustic specifications. It is written for non-specialists and gives an outline of potential problems. It also shows what to

frazzled. That's why the handmade object, created with care and detail, embodying a history and a tradition, is enormously powerful. It can cut through so much and speak in ways that we don't often hear, or that we've forgotten." —Eric Gorges, from *A Craftsman's Legacy* In this joyful celebration of skilled craftsmen, Eric Gorges, a corporate-refugee-turned-metal-shaper, taps into a growing hunger to get back to what's real. Through visits with fellow artisans—calligraphers, potters, stone carvers, glassblowers, engravers, woodworkers, and more—many of whom he's profiled for his popular television program, Gorges identifies values that are useful for all of us: taking time to slow down and enjoy the process, embracing failure, knowing when to stop and when to push through, and accepting that perfection is an illusion. Most of all, *A Craftsman's Legacy* shows how all of us

years. Now a completely updated new edition has been published. It was prepared by a team of industrial textile specialists at Auburn University to provide both technical and management personnel with a comprehensive resource on the current technology and applications of today's industrial textiles. All aspects of industrial textiles are covered: man-made and natural materials, manufacturing and finishing methods, and all applications. There are also sections on properties, testing, waste management, computers and automation, and standards and regulations. The appendices provide extensive reference data: properties, specifications, manufacturers and trade names, mathematical equations and measurement units. The text is organized for easy reference, and well illustrated with hundreds of schematics and photographs.
