The new edition of this well-known hybrid anatomy core text and atlas takes you from knowing human anatomical structures in the abstract to identifying human anatomy in a real body. Now fully revised and updated, it remains the only text and atlas of gross anatomy that illustrates all structures using high-quality dissection photographs AND clearly labelled line drawings for each photograph. This is combined with concise yet thorough text to support and explain all key human anatomy and clearly relate it to clinical practice. High quality, richly coloured dissection photographs show structures most likely to be seen and tested in the lab - helps you recognize and interpret gross specimens accurately Interpretive line drawings next to every photograph, with consistent colour-coding - helps you clearly identify structures and differentiate fat, muscle, ligament, etc. 'Clinical Skills' pages and new highlighting of the most clinically relevant text helps readers quickly understand how to apply knowledge of gross anatomy to the clinical setting New photographs reflect the latest imaging techniques as seen in current practice
