Data-driven decision making (or DDDM) is the process of making organizational decisions based on actual data rather than intuition or observation alone. Every industry today aims to be data-driven. No company, group, or organization says, "Let's not use the data; our intuition alone will lead to solid decisions."

Data modeling (data modelling) is the process of creating a data model for the data to be stored in a database. This data model is a conceptual representation of Data objects, the associations between different data objects, and the rules. Data modeling helps in the visual representation of data and enforces business rules, regulatory compliances, and government policies on the data.
