Also in the preface, the authors state that "rather than focusing on how to build a database management system (DBMS), our approach focuses on how to build applications that use such a system. We believe that many more students will be implementing database applications than building DMBSs." That might be true.

A Database Management System allows a person to organize, store, and retrieve data from a computer. It is a way of communicating with a computer's "stored memory." In the very early years of computers, "punch cards" were used for input, output, and data storage. Punch cards offered a fast way to enter data, and to retrieve it.

A Brief History of Database  
Management - DATAVERSITY

An object database is a database management system in which information is represented in the form of objects as used in object-oriented programming. Object databases are different from relational databases which are table-oriented. Object-relational databases are a hybrid of both approaches.. Object databases have been considered since the early 1980s.
