Children in today's world are inundated with information about who to be, what to do and how to live. But what if there was a way to teach children how to manage priorities, focus on goals and be a positive influence on the world around them? The Leader in Meis that programme. It's based on a hugely successful initiative carried out at the A.B. Combs Elementary School in North Carolina. To hear the parents of A. B Combs talk about the school is to be amazed. In 1999, the school debuted a programme that taught The 7 Habits of Highly Effective Peopleto a pilot group of students. The parents reported an incredible change in their children, who blossomed under the programme. By the end of the following year the average end-of-grade scores had leapt from 84 to 94. This book will launch the message onto a much larger platform. Stephen R. Covey takes the 7 Habits, that have already changed the lives of millions of people, and shows how children can use them as they develop. Those habits -- be proactive, begin with the end in mind, put first things first, think win-win, seek to understand and then to be understood, synergize, and sharpen the saw -- are critical skills to learn at a young age and bring incredible results, proving that it's never too early to teach someone how to live well.

As a father of three young adult children, a registered nurse, a former Boy Scout leader, and a former college professor, I noticed a serious lack of training offered to young adults in the skills needed to be able to live on their own. In the past, this training was offered in high school under the name of Home Economics, but these skills were no longer being taught in school. In these classes, students learned how to manage money, cook simple meals, do laundry, and do other skills needed to survive and succeed in the world. It also came to my attention that many young adults were not learning these skills at home. This project was undertaken with the needs of these young adults in mind. This resource is directed toward people who are in their late high school through college years. It is a structured means of conveying to students the information needed to survive and thrive on their own, outside of their parents' home. This curriculum is structured as a five-class course divided into thirty-two different modules, giving the educator versatility in its presentation. Each module can be taught as a stand-alone class or grouped together in whatever way works for the educator and their students. The topics covered include budgeting and other financial basics, cooking, doing basic home repairs, preparing to enter the workforce (including interviewing for a job), relating to and communicating with others, caring for their personal bodies and minds, and doing many others.

Drawing on stories from successful programs and research, this book shows librarians how to provide students with the practical information they need for a bright future. Chapters cover career readiness, financial literacy, and civic responsibility at each grade level. • Addresses the problem of gaps in most school curriculums • Defines the school librarian's leadership role in addressing this problem • Gives concrete examples, tools, and lessons for use in schools K–12 • Defines the school librarian's role in collaboratively addressing readiness for the real world after high school

Featuring incredible photos and new information about the latest research into Mars, this updated edition of DISCOVERING MARS covers everything about the great red planet, from past to present. Topics include myths and facts about life on Mars, a history of NASA's Mars research, including the Rover missions, and ideas about our potential future relationship with the planet. With its lively text narrative and beautiful color photos, students and teachers alike will enjoy learning everything there is to know about Mars.

First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do-with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.
