The Geometry Of Behavior

Abraham's Geometry of Behavior series was originally planned to be a five volume set explicitly designed to cover DST VISUALLY, with as little symbolic math as possible, to give students a real intuitive feel for the geometry and inner meaning of saddle points, attractors and repellers, characteristic exponents, chaos, oscillation and much more.

The study of chaos provides a new paradigm for the sciences, and Dynamics: The Geometry of Behavior is a comprehensive exploration of this important branch of mathematics. The book shows a new way to learn a new mathematics -- it is a visual tour that's accessible to a wide range of academic levels. Imaginative, full color graphics translate dynamical systems theory for the layman as well as the seasoned researcher. Dynamics: The Geometry of Behavior is a profusely illustrated, inventive book designed for anyone who wants to learn more about dynamical system theory. This is the first part of a four part series, which is also published as a single volume.

The authors use lively, full-color illustrations to introduce readers to the field of dynamical systems theory. This is a visual mathematics book that is accessible to a broad audience. Dynamics is organized into four main sections covering periodic behavior, chaotic behavior, global behavior, and bifurcation.
