This book covers various standards in E-commerce, e.g. data communication and data translation. There are extensive illustrations on various issues ans E-commerce models, which provide a direction in the process of universal E-commerce. It is a complete guide to a business manager.

Among the many changes brought by the Internet is the emergence of electronic commerce over the Web. E-commerce activities, such as the online exchange of information, services, and products, are opening up completely new opportunities for business, at new levels of productivity and profitability. In parallel with the emergence of e-commerce, intelligent software agents as entities capable of independent action in open, unpredictable environments have matured into a promising new technology. Quite naturally, e-commerce agents hold great promise for exploiting the Internet's full potential as an electronic marketplace. The 20 coherently written chapters in this book by leading researchers and professionals present the state of the art in agent-mediated e-commerce. Researchers, professionals, and advanced students interested in e-commerce or agent technology will find this book an indispensable source of information and reference.

The convenience of online shopping has driven consumers to turn to the internet to purchase everything from clothing to housewares and even groceries. The ubiquity of online retail stores and availability of hard-to-find products in the digital marketplace has been a catalyst for a heightened interest in research on the best methods, techniques, and strategies for remaining competitive in the era of e-commerce. The Encyclopedia of E-Commeres Development, Implementation, and Management is an authoritative reference source highlighting crucial topics relating to effective business models, managerial strategies, promotional initiatives, development methodologies, and end-user considerations in the online commerce sphere. Emphasizing emerging research on up-and-coming topics such as social commerce, the Internet of Things, online gaming, digital products, and mobile services, this multi-volume encyclopedia is an essential addition to the reference collection of both academic and corporate libraries and caters to the research needs of graduate-level students, researchers, IT developers, and business professionals. .

Over 170 essays dealing with new Internet technologies related to business.

Our Guidebook can also help in providing a comprehensive overview of important topics in each subject, making it easier for students to prepare for the exams.

The first six chapters of the text examine four broad issues: the role of the Internet in fostering competition, its impact on price dispersion and on business-to-business transactions, and the importance of reputation and trust in the new economy. The last four chapters examine the impact of the Internet on the organization of firms, the efficiency of auctions in the Internet age, how consumers choose websites and acquire product information, and the growing problem of congestion on the Internet.

This book constitutes the joint refereed proceedings of the First International Workshop on Theory Building and Formal Methods in Electronic/Mobile Commerce, TheFormEMC, the first European Performance Engineering Workshop, EPEW, and the First International Workshop on Integration of Testing Methodologies, ITM, held jointly in association with FORTE 2004 in Toledo, Spain, in October 2004. The 27 revised full papers presented were carefully reviewed and selected from a total of 62 submissions. The papers are grouped in three topical sections corresponding to the workshop topics.

This publication contains the proceedings of the 5th international conference on chain and network management in agribusiness and the food industry. Papers will focus on the paradoxes caused by conflicting interests in the fields of economics and ethics, technology and environment, legislation and internationalisation, etc. The modern consumer demands highquality products, in broad assortments throughout the year, and for competitive prices. Society imposes constraints on companies in order to economize on the use of resources, ensure animal-friendly and safe production, and restrict pollution. Together with technological developments and increased international competition, these demands have changed the production, trade, and distribution of food products beyond recognition. Demand is no longer confined to local or regional supply. The food industry is now swiftly becoming an interconnected system with a large variety of complex relationships. This is changing the way food is brought to the market. Currently, even fresh produce shipped from halfway around the world can be offered at competitive prices. These developments are accompanied by national and international regulations and legislation in the area of food quality and safety. In response to these changes, business strategies must now focus not only on traditional economical and technological interests, but also on topical issues such as the safety and healthfulness of food products, animal friendliness, the environment, etc. To effectively address paradoxical demands facing businesses, many problems and opportunities must be approached from a multi-disciplinary perspective, and trade-offs must be made between different aspects of production, trade and the distribution of food.
