Think of a scavenger hunt, then add devices (Smartphones, Chromebooks, Laptops, or Tablets), engaged students, and learning thro

Ecological Succession Activity & Worksheets | Teachers Pay ...

Learners explore and describe how succession affects biodiversity by creating an island ecosystem in an interactive game.

Ecological Succession | Texas Gateway

Ecological succession is the process that describes how the structure of a biological community (that is, an interacting group of various species in a desert, forest, grassland, marine environment, and so on) changes over time. Species that arrive first in a newly created environment (such as an island rising out of the sea) are called pioneer species, and they, through their interactions with ...

When a family of wolves is removed from the food chain on a small island, the impact on the island's ecology is felt by the other animals living there.

"This book presents international authors, who are teacher educators, and their best practices in their environments, discussing topics such as the online learning environment, multimedia learning tools, inter-institutional collaboration, assessment and accreditation, and the effective use of Web 2.0 in classrooms"--Provided by publisher.

Enhancement Exercises for Biology can augment any college-level biology course. The active learning modules featured in the Enhancement Exercises provide the best opportunity for students to learn and experience biology. The modules challenge students by providing activities ranging from simple, guided inquiry to more thoughtful, open-ended, research-based activities. Assign all or a portion of an individual exercise as applicable to your specific course. This book has been designed so the student can complete the assignments without any need for specialized lab equipment. The exercises can be completed by visiting local outdoor environments or by using common items easily

obtained at home or the grocery store.

This book invites us to reflect on the restoration of terrestrial ecosystems in the context of a region whose identity is still under construction, Latin America and the Caribbean, immersed in a social, economic, ecological and political crisis, whose roots originate historically and politically in colonialism and in the prevailing model of capital accumulation. For the first time, insights and practical experiences on restoration are gathered from most Latin-American and Caribbean countries. Furthermore, this book offers a social approach to restoration, which will likely become preponderant in this field and in this region. The authors claim that a Latin-American knowledge of restoration is under construction and that this discipline can be a significant tool to empower local populations, which might, in turn, lead to a collective action of change. Case studies from 11 countries of the region were compiled, involving multiple voices that emerge beyond generalist principles and with a bottom-up approach. The main idea of the book is to open a debate about the identity of ecological and social restoration in this region. This book is targeted to restoration specialists, volunteers, environmental managers, researchers, politicians and NGOs working on the complexity of socioecological restoration in a region with unavoidable social problems. It is intended for people with similar concerns to those of the chapters' authors. This work tries to integrate a movement on the rise, almost silent, born with its own narratives of successes and failures that do not hinder its development. Finally, the determination and commitment of Latin-American and Caribbean social actors to restore not only natural values but also social, ethical and cultural ones is remarkable.

This all-new set of original science tales for children utilizes the power of storytelling to explore ecology's big ideas, providing extensive accompanying teacher support for maximum impact. • A dozen original tales that celebrate our relationship to the wild world through creative writing • More than 30 lesson plans for using the book's stories to the fullest, including separate plans for teaching each story to students at different levels • Dozens of original pen and ink drawings that illuminate the natural world • An annotated bibliography of books and websites for teachers and students, allowing further exploration of the ideas examined in the stories

This innovative book integrates practical information from restoration projects around the world with the latest developments in successional theory. It recognizes the critical roles of disturbance ecology, landscape ecology, ecological assembly, invasion biology, ecosystem health, and historical ecology in habitat restoration. It argues that restoration within a successional context will best utilize the lessons from each of these disciplines.

Focused on and organized around environmental issues, this innovative new book helps you critically evaluate possible solutions to the environmental problems we now face. The authors outline specific environmental issues and provide the scientific background to enable you to understand each issue. In order to find and apply solutions to these problems, they help you see that the problems are not insurmountable and that something can be done to achieve a sustainable future. The modular chapters provide full descriptions of each of the major environmental problems with real stories about what people are doing to tackle the resulting challenges.
