The electronic governor converts the change of diesel engine speed into the change of electric quantity, and controls the actuator after sampling and amplifying. This governor can adjust the fuel supply before the speed of diesel engine changes obviously, and obtain high adjusting precision, and realize parallel operation without difference.

Introduction of Governor in Diesel Generator

Diesel engine generator governors are sometimes referred to as the speed controller for the diesel engine. The diesel engine must maintain a pre-determined speed to maintain generator output specifications. If the engine speed is not correct the generator will not maintain the required output specifications.

Diesel Engine Generator Governors

Electronic governors deliver fast, no-droop response to load changes and isochronous speed control for gensets. They are up to 200 times faster than mechanical governors. This means that there is no droop on gen-sets, so power stays constant under variable loads on pumps and other engine applications.
