Beginning in the 1940s, materials science began to be more widely recognized as a specific and distinct field of science and engineering, and major technical universities around the world created dedicated schools for its study. Materials science is a syncretic discipline hybridizing metallurgy, ceramics, solid-state physics, and chemistry. It is the first example of a new academic discipline emerging by fusion rather than fission.

Advice please? Materials Science or Electrical Engineering ...

I would suggest electrical engineering with a minor (physics, materials, biomedical). If you want to work with the materials degree in this fields you'll need either a matters with a damn good thesis and publications or a PhD. You can always get an electrical minor and then get the graduate degree in materials if that's your goal.
