Also Available with MasteringGeography (tm) This title is also available with MasteringGeography -- an online homework, tutorial, and assessment product designed to improve results by helping students quickly master concepts. Students benefit from self-paced tutorials that feature immediate wrong-answer feedback and hints that emulate the office-hour experience to help keep students on track. With a wide range of interactive, engaging, and assignable activities, students are encouraged to actively learn and retain tough course concepts.

This book offers a treatment of the elements of physical geography without sacrificing scientific content. The book is written, organized, and illustrated to give an accessible, systematic, and visually appealing start in physical geography. It presents the most up-to-date information about Earth's physical systems available in an introductory book all viewed through the spatial analysis approach unique to physical geography. The book is supported by a superior cartographic and illustration program.

Offering current examples and modern science within a one-of-a-kind Earth systems organization, 'Geosystems' provides a truly unique physical geography experience.

One of the foremost chroniclers of the contemporary black experience offers an undeluded perspective on the 1980s. Here are crack, AIDS, and the Reagan rollback of the major advances of the civil rights movement. But Nelson George also shows how black performers, athletes, and activists made increasing inroads into the mainstream. This fast-paced, chronological retrospective profiles personalities from Bill Cosby to Louis Farrakhan and explores such flashpoints as the first rap single and the infamous Willie Horton ad campaign. **PLEASE PROVIDE COURSE INFORMATION**Ideal for use with any text on Physical Geography, this laboratory manual contains step-by-step exercises that help students apply essential geographic principles, methods, and tools to better understand Earth and its systems. Organization of each lab exercise chapter entails an introduction, key terms and concepts listing, objectives of the chapter, and a listing of materials and sources needed to complete the exercises. The initial laboratory exercise is called the Prologue Lab and is unique to this manual. The assignments in the Prologue are meant to span the entire term and will provide students with the tools of spatial analysis that are at the core of geography.

This book is an introduction into the reductionism-holism debate, for aspiring as well as accomplished scientists. It is intended for those working in, or preparing for, research in any scientific field--ranging from the physical sciences to the life sciences to the behavioral sciences and the social sciences. It is certainly not meant for people specialized in areas dealing with the specific issue of reductionism in a strict philosophical sense; they won't learn much new from this book. In other words, this is not a monograph with specialized, original research, but rather an initiation into the debate--more like an introductory textbook, if you will.

In Broken by Water: Salish Sea Years, the contemporary world is suffused with the past, a world where even the briefest moments are layered with meaning: widgeons spooked into flight echo the horror of orcas being captured in a quaint harbor; clouds storming north are like a massive spring migration and make human life seem insignificant; a raven's croak underscores the outrage of old-growth devastation; one vandalized grave portends the end of our world. These poems are alive in the moment precisely because they bring the dark, often forgotten, past into the light.

This book is the result of collaboration within the frames of the 5th International Conference "Trigger Effects in Geosystems" held in the Institute of Geosphere Dynamics of Russian Academy of Sciences, June 2019. This book aims to raise awareness about different triggering aspects in the geosphere and its effects.The conference provided a multidisciplinary platform with a focus on (i) the influence of natural and anthropogenic factors on the geosphere, geomechanical systems and anthropogenic objects found in a subcritical state and (ii) the influence of these factors on the system "atmosphere - ionosphere". The problems considered in the book may be interesting for a wide audience including students, professionals, researches, and for the industry.
