Elements of Spacecraft Design. This book is drawn from the author's years of experience in spacecraft design, culminating in his leadership of the Magellan Venus orbiter spacecraft design from concept through launch. The book also benefits from his years of teaching spacecraft design at University of Colorado at Boulder and from its use as a popular home study short course for AIAA. The book presents a broad view of the complete spacecraft.

Some key elements, like fluid dynamics, were understood by 18th-century scientists. In December 1903, the Wright Brothers performed the first sustained, controlled flight of a powered, heavier-than-air aircraft, lasting 12 seconds. The 1910s saw the development of aeronautical engineering through the design

~~Akin's Laws of Spacecraft Design~~

Elements of Design: Line. Lines are the most basic elements of design. They come in all shapes, sizes, and colors. Once you start noticing them, you'll see grids all around you. Lines have direction; they can be visible or invisible and can help direct the eye to a specific spot. The thickness of a line can also communicate certain cues.

1. Micro white space and macro white space. Micro white space is the space between the small elements like letters, text lines, paragraphs, icons, and buttons. Macro white space, on the other hand, is the space between bigger elements like text columns and graphics. It also refers to paddings and margins.
