Jack Reacher walked out of the Baltimore bust depot into a world of frozen streets and dirty snow... In this short story from the thrilling anthology MatchUp, bestselling authors Kathy Reichs and Lee Child—along with their popular series characters Temperance Brennan and Jack Reacher—team up for the first time ever.

The Skyway Men have ruled the underworld of the skylands for centuries-- killing, stealing and doing whatever it takes of increase their wealth and power. Pistols, money and fear are their weapons of choice. After a decade exiled to a small piece of farmland that flies the quietest windlanes, Kade is thrust back into the world of death, corruption, shady deals and dirty deeds. But it's just like old times. He doesn't know who to trust. He doesn't know who's on which side. He doesn't even know which side he's on any more. All Kade knows for sure is that murder and mayhem aren't what they used to be.

Never Far Away is a short story and resource for the parent who has a child that doesn't like to separate from them when time for school or work. It has illustrative pictures and content for the parent and child to interact before they go about their day.

Multi-time author and well-regarded performance engine builder/designer John Baechtel has assembled the relevant mathematics and packaged it all together in a book designed for automotive enthusiasts. This book walks readers through the complete engine, showcasing the methodology required to define each specific parameter, and how to translate the engineering math to hard measurements reflected in various engine parts. Designing the engine to work as a system of related components is no small task, but the ease with which Baechtel escorts the reader through the process makes this book perfect for both the budding engine enthusiast and the professional builder.

This book tells you why and how.This book brings together a collection of popular articles previously published by the author in assorted car magazines. Based on in-depth research carried out at Manchester University, the articles investigate how classic engines respond to modern petrol/gasoline, and the results are presented in a way that any enthusiast can understand. One chapter ranks some brands and grades of modern petrol/gasoline, helping you choose the best type for your vehicle, while other chapters present the findings that debunk some of the myths about petrol/gasoline and engines. Real data is provided to help you tune your classic vehicle, ensuring that it runs as it should, allowing you to experience the pleasure of driving your classic car instead of worrying about it breaking down. The appendix gives a down-to-earth description of how to rebuild and tune SU and similar carburettors. Paul Ireland's years of experience and no-nonsense scientific approach will help you get the best from your classic car.

In order not to intimidate students by a too abstract approach, this textbook on linear algebra is written to be easy to digest by non-mathematicians. It introduces the concepts of vector spaces and mappings between them without dwelling on statements such as theorems and proofs too much. It is also designed to be self-contained, so no other material is required for an understanding of the topics covered. As the basis for courses on space and atmospheric science, remote sensing, geographic information systems, meteorology, climate and satellite communications at UN-affiliated regional centers, various applications of the formal theory are discussed as well. These include differential equations, statistics, optimization and some engineering-motivated problems in physics. Contents Vectors Matrices Determinants Eigenvalues and eigenvectors Some applications of matrices and determinants Matrix series and additional properties of matrices
