Disconnected, dirty or fouled spark plugs are common causes for engines that won't start. For small engines, spark plugs typically need to be replaced every season or after 25 hours of use. You should also check to make sure the spark plug gap is set correctly. An improper spark plug gap could lead to engine knocking and poor performance.

Troubleshooting small engine problems | Briggs & Stratton

Loudest when the engine is under load or acceleration, crankshaft knock can be diagnosed by paying close attention to the specific type of knock: A regular, rumble-like knock is often from worn main bearings. A more distinct knock is routinely attributed to worn rod bearings. A sharp, irregular knock can be from a worn crankshaft thrust bearing.

Sounds Like Trouble: A Quick Guide to Diagnosing Common ...

Your engine either seems to bog down when you hit the gas pedal, or it takes a second or two to respond. It's not quite a stutter, not quite a stall, and it doesn't matter if the engine is hot, cold, or low on gas. There are a number of possible causes, but you're going to have to take a good look at your engine to try and diagnose the problem.

Ford Powerstroke Diagnostic Trouble Codes | Thoroughbred ...

In order to easily diagnose problems, it helps to first understand how an engine actually works. Engines roar to life through a process called combustion. Combustion is nothing more than a controlled explosion that creates your engine's power, turning it into a usable mechanical force to get work done.
