Symbols for Indicating Surface Finish. The quality of surface finish on a metal surface produced by any production method other than machining is indicated on the drawing by tick symbol. This basic symbol consists of two legs of unequal length inclined at approximately 60 to the line representing the surface to be machined with the vertex touching it. If the surface finish is to be obtained by removing the material by any of the machining processes, a horizontal bar is to be added to the ...

Geometric Dimensioning and Tolerancing is a system for defining and communicating engineering tolerances. It uses a symbolic language on engineering drawings and computer-generated three-dimensional solid models that explicitly describe nominal geometry and its allowable variation. It tells the manufacturing staff and machines what degree of accuracy and precision is needed on each controlled feature of the part. GD&T is used to define the nominal geometry of parts and assemblies, to define the
