The methodological needs of environmental studies are unique in the breadth of research questions that can be posed, calling for a textbook that covers a

broad swath of
approaches to
conducting research
with potentially many
different kinds of
evidence. Written
specifically for social
science-based research
into the environment,
this book covers the best-

connections to societal and economic activities and objectives. Over five key parts,

Kanazawa introduces quantitative and qualitative approaches, mixed methods, and the special requirements of interdisciplinary research, emphasizing that methodological practice should be tailored to the specific

needs of the project.

Within these parts, detailed coverage is provided on key topics including the identification of a research project; spatial analysis; ethnography approaches; interview technique; and ethical issues in environmental research. Drawing on a variety of extended examples to encourage

Download Free Environmental

problem-based learning and fully addressing the challenges associated with interdisciplinary investigation, this book will be an essential resource for students embarking on courses exploring research methods in environmental studies.
