Bobby Hale is a Union veteran several times over. After the war, he sets his sights on California, but only makes it to Montana. As he stumbles around the West, from the Wyoming Territory to the Black Hills of the Dakotas, he finds meaning in the people he meets-settlers and native people-and the violent history he both participates in and witnesses. *Far as the Eye Can See* is the story of life in a place where every minute is an engagement in a kind of war of survival, and how two people-a white man and a mixed-race woman-in the midst of such majesty and violence can manage to find a pathway to their own humanity. Robert Bausch is the distinguished author of a body of work that is lively and varied, but linked by a thoughtfully complicated masculinity and an uncommon empathy. The unique voice of Bobby Hale manages to evoke both Cormac McCarthy and Mark Twain, guiding readers into Indian country and the Plains Wars in a manner both historically true and contemporarily relevant, as thoughts of race and war occupy the national psyche.

Longleaf forests once covered 92 million acres from Texas to Maryland to Florida. These grand old-growth pines were the "alpha tree" of the largest forest ecosystem in North America and have come to define the southern forest. But logging, suppression of fire, destruction by landowners, and a complex web of other factors reduced those forests so that longleaf is now found only on 3 million acres. Fortunately, the stately tree is enjoying a resurgence of interest, and longleaf forests are once again spreading across the South. Blending a compelling narrative by writers Bill Finch, Rhett Johnson, and John C. Hall with Beth Maynor Young's breathtaking photography, *Longleaf, Far as the Eye Can See* invites readers to experience the astounding beauty and significance of the majestic longleaf ecosystem. The authors explore the interactions of longleaf with other species, the development of longleaf forests prior to human contact, and the influence of the longleaf on southern culture, as well as ongoing efforts to restore these forests. Part natural history, part conservation advocacy, and part cultural exploration, this book highlights the special nature of longleaf forests and proposes ways to conserve and expand them.

An entertaining and innovative account of pioneering Portuguese men and women who settled the vast frontier of the American West

In 2015 #thedress captured the world ' s imagination. Was the dress in the picture white and gold or blue and black? It inspired the author to ask: if people in the same time and place can see the same thing differently, how did people in distant times and places see the world? Jam-packed with fascinating stories, facts and insights and impeccably researched, *A History of Seeing in Eleven Inventions* investigates the story of seeing from the evolution of eyes 500 million years ago to the present day. Time after time, it reveals, inventions that changed how people saw the world ended up changing it altogether. Twenty-first-century life is more visual than ever, and seeing overwhelmingly dominates our senses. Can our eyes keep up with technology? Have we gone as far as the eye can see?

Art as *Far as the Eye Can See* puts art back where it matters -- at the center of politics. Art used to be an engagement between artist and materials but it has now become technologized. Its materials have become light rather than matter. In the 21st Century the new battleground is art as light versus art as matter. Virilio argues that this change reflects how speed and politics - the defining characteristics of the 20th Century - have been transformed in the 21st Century to speed and mass culture. Politics has been replaced with mass culture...and the defining characteristic of mass culture today is cold panic. The same panic which has used terrorism to derail democracy has hijacked the whole art enterprise. This panic is reliant on audio-visual technology to create a new all-seeing, panoptic politics. And the first casualty of this politics is "the art of seeing". Where art used to talk of the aesthetics of disappearance, it must now confront the disappearance of the aesthetic. In the 21st Century, the new battleground is art as light versus art as matter.

An account of the journey across the unexplored territory west of the Mississippi River undertaken by Meriwether Lewis and William Clark in the early eighteen hundreds by order of President Jefferson.

As Far As The Eye Can See is a story filled with twists and turns during the search for family and ultimately love. Only in his late twenties, Evan Stevenson finished his state senate campaign on top. The long, tiring process has left him completely empty. There has always been something that never allowed him to ever truly be satisfied. He has a hint of what is missing in his life when he finds a photograph that introduces him to his late father. With so many questions left unknown about his roots, he begins his search for answers. Throughout the journey of finding himself, he is faced with a rollercoaster of emotions. After paying a visit to a family member, it leads him to a place where he never imagined going. He begins to gain closure and answers to some of the questions he once had. During his time here, light will be shed on his past and on the biggest part of his life that he has left behind. It will be up to him to find it.

"Gavin Shaw has been sleepwalking through his life since his wife died six years ago, finding some contentment with his quiet farm life and small group of loyal friends. For reasons he cannot explain, Gavin takes pity on a recently widowed woman, Emily Mitchell, who is surviving a nightmare of her own and seeking a job on his farm to support her young son. Bonded by tragedy, the two become friends, helping each other in ways they never knew they needed, learning the importance of loss and second chances, and the beauty of friendships that turn into family." --

Many an armchair hiker has dreamed of traversing the Appalachian Trail in its entirety. In 1979, David Brill became one of the first of a new generation to complete the Georgia-to-Maine hike. Published by The Appalachian Trail Conference, As Far as the Eye Can See chronicles his six-month, 2,100-mile walk, a quest to live simply and deliberately, with room to grow, to breathe, to change, to discover what really mattered to him. This book is required reading for anyone interested in getting beyond the day-to-day slog of the hike to explore the emotional and spiritual dimensions of a long journey on foot.

In the 144 poems of For as Far as the Eye Can See, Robert Melançon re-imagines the sonnet as a "rectangle of twelve lines," and poetry as "a monument as fragile as the grass." Impressionistic, seasonal, allusive, in language sharp and clean, this form-driven collection is both a book of hours and a measured meditation on art, nature, and the vagaries of perception. Robert Melançon is one of Québec's most revered contemporary poets and a two-time winner of the Governor General's Award. A longtime translator of Canadian poet A.M. Klein, Melançon has been the poetry columnist for *Le Devoir* and the Radio-Canada program *En Toutes Lettres*; he is also a critic and has been a professor at the University of Montreal. In addition to the Governor General's Award he is a past recipient of the Prix Victor-Barbeau and the Prix Alain-Grandbois.
