A high score represents a high level of fear of intimacy. Among women, A study conducted by Reis and Grenyer found that women with depression have much higher levels of fear of intimacy. Another study found that fear of intimacy among women might be strongly associated with actual intimacy instead of desired intimacy. This study also found that the level of the woman's fear of intimacy is a good indicator of the longevity of a couple's relationship.

**Fear of intimacy - Wikipedia**  
Most people have a fear of intimacy and at the same time are terrified of being alone. Their solution is to form a fantasy bond – an illusion of connection and closeness – that allows them to maintain emotional distance while assuaging loneliness and, in the process, meeting society's expectations regarding marriage and family.

**Overcoming the Fear of Intimacy - PsychAlive**  
On a 7- point scale that ranged from no fear of intimacy (1) to a high fear of intimacy (7), therapists rated how much fear of intimacy the client would have in a close, dating relationship. Also, on a 7-point scale that ranged from not at all self-disclosing (1) to very (7), thera- pists rated how self-disclosing the client had been with them.
