Feedback control is an interdisciplinary field in that control is applied to systems in every conceivable area of engineering. Consequently, some schools have separate introductory courses for control within the standard disciplines and some, such as Stanford University, have a single set of courses taken by students from many disciplines.

Chapter 7 Solutions | Feedback Control Of Dynamic Systems ...
To overcome the limitations of the open-loop controller, control
theory introduces feedback. A closed-loop controller uses feedback
to control states or outputs of a dynamical system. Its name comes
from the information path in the system: process inputs (e.g.,
voltage applied to an electric motor) have an effect on the process
outputs (e.g., speed or torque of the motor), which is measured with
