This book looks at financial advisory from a behavioural perspective, and focuses on how the nature of the relationship between advisors and clients may affect the ability of the advisor to perform its functions. Broken into three key parts, the book looks at the client, the advisor, and the relationship between the two. Chapters review relevant theories of decision-making under risk to understand the nature of clients' decisions. The literature on advisors' functions and the normative landscape regulating financial advisory are also addressed. Finally, this book reviews how behavioural finance has traditionally addressed portfolio selection and explains how trust can be seen as a viable avenue to maximize advisors' effectiveness and pursue clients' needs. This book will be of interest to both behavioural finance scholars and practitioners interested in understanding what the future of financial advisory may have in stock.

The UN-supported Principles for Responsible Investment initiative has led to around a third of the world's financial assets being managed with a commitment to invest in a way that considers environmental, social or governance (ESG) criteria. The responsible investment trend has increased dramatically since the global financial crisis, yet understanding of this field remains at an early stage. This handbook provides an atlas of current practice in the field of responsible investment. With a large global team of expert contributors, the book explores the impact of responsible investment on key financial actors ranging from mainstream asset managers to religious organizations. Offering students and researchers a comprehensive introduction to current scholarship and international structures in the expanding discipline of responsible investment, this handbook is vital reading across the fields of finance, economics and accounting.
