Introduction. In the work known as Harmonice Mundi, the German scientist and mathematician, Johannes Kepler (1571-1630) presented to the world the culminating application to questions of astronomy of the method which he had defined in his first book (Mysterium Cosmographicum (1599). Many know of Harmonice Mundi as the work in which Kepler announced the third of his laws of planetary motion: the ratio of the cube of the (average) radius of the planet's orbit to the square of its periodic time ...

In astronomy, Kepler's laws of planet motion are three scientific laws describing the motion of planets around the Sun, published by Johannes Kepler between 1609 and 1619. These modified the heliocentric theory of Nicolaus Copernicus, replacing its circular orbits and epicycles with elliptical trajectories, and explaining how planetary velocities vary. The laws state that: Figure 1: Illustration of Kepler's three laws with two planetary orbits. The orbits are ellipses, with focal points F1 and F

Kepler concluded that the orbit of Mars was an ellipse with the Sun in one of its foci (a result which when extended to all the planets is now called "Kepler's First Law"), and that a line joining the planet to the Sun swept out equal areas in equal times as the planet described its orbit ("Kepler's Second Law"), that is the area is used as a measure of time.
