This book is a rebuttal of the common belief that grave environmental consequences are associated with the issues of global warming and nuclear hazards. Firstly, it is argued that after 25 years of research no-one has actually found evidence for greenhouse warming. Instead, the heat has caused the evaporation of ocean water to increase cloud coverage, reflecting more sunlight away, cooling down the earth and nullifying the effects of greenhouse warming. The author describes this revolution in climatology through new scientific discoveries that solve the longstanding mystery of the ice ages and explain the enigma of the missing greenhouse heat. The solution of the ice age problem is a far most important scientific accomplishment. In the second part of the book, the author argues that the effects of low-level radiation can be beneficial rather than damaging. Evidence is presented proving that low-level radiation in the US from both natural sources and human activities such as nuclear bombs tests actually reduces death rates from cancer and other diseases and increases longevity. In the Indian State of Kerala life span has been shown to increase 10.5 years due to the natural radiation from thorium mines. The book proposes that primitive life forms must have developed immune systems to counter the harmful effects of natural radioactivity and that low-level radiation from nuclear waste may one day be transformed from trash to treasure. Nature has always been kind to humans. But our self-aggrandizing species has mistaken blessings for disasters and spoiled the otherwise splendid 20th century.  
Contents: Greenhouse Warming and Nuclear Hazards: Three Smoking Guns Prove the Falsity of Greenhouse Warming Nuclear Waste Disposal, from Trash to Treasure Cancer Death Rates of 50 States of US Related to Natural and Nuclear-Bomb-Test-Induced Low Level Radiation Greenhouse Warming: Latent Heat of Melting and Its Importance for Glaciation Cycles Origin of Ice Ages: Initial Condition Forcing and Dynamics Unraveling a Century's Mystery of the Ice Ages The Fourth Phase of Water and the Theories of Greenhouse Effects and Ice Age Glacial Cycles Research Papers on Nuclear Hazards: The Ultimate Direct Measurement of Low Level Radiation Effects Long Life Expectancy as the Beneficial Effect of Low Radiation Low Level Radiation Extends Life Span by Cutting Death Rates of Disease Including Heart Disease, Cancer, Stroke, etc. Reexamining Nuclear Energy Safety Readership: Undergraduates and general public.
