In Fox formula (planning function type 0RSPL_FORMULA), there are three functions for variable: VARV, VARC, VARI. Let's use some examples to know how to use it. 1. VARV. Meaning: Get a variable value. Usage example:

~~Three variable functions (VARV, VARC, VARI) in FOX ... – SAP~~
First of all this is an example. There are different ways to get good performance in HANA in combination with PAK. FOX Formulas which are using ABAP function modules are not running in memory. The first possibility would be to change the calls for function modules to “ read for reference data ” from external aggregation layers.
