Despite much of the world's attention turning to Scotland in 2014 in the year of its Independence Referendum, this is the only ethnographic study of Scottish nationalism to have appeared so far. Based upon over fifteen years of research in a particular locality, the author not only gives the reader an intimate portrait of the relations between class and national identity in contemporary Scotland but provides an intimate description of a particular Scottish locality from 1999 to 2014. This patient ethnographic study also gives an account of how the sociological imagination is indispensable in the task of 'integral liberation' as it models how empirical sociological study can give an account of human beatitude and, ultimately, answer the question of transcendence and integrates with the Christian tradition. This book then attempts to state the full significance of Scottish nationalism upon the basis of a full or integral account of fully-contextualised Scottish human being, and in succeeding in this ambitious endeavour the author has produced a remarkable book that deserves the attention of students of the social sciences and theology alike.

Shinners, dissos, and dissenters is a long-term analysis of the development of Irish republican media activism since 1998 and the tumultuous years that followed the end of the Troubles. It is the first in-depth analysis of the newspapers, magazines and online spaces in which strands of Irish republicanism developed and were articulated in a period in which schism and dissent underscored a return to violence for dissidents. Based on an analysis of Irish republican media outlets as well as interviews with the key activists that produced them, this book provides a compelling snap shot of a political ideology in transition as it is moulded by the forces of the Peace Process and often violent internal ideological schism that threatened a return to the 'bad old days' of the Troubles.

This book constitutes the thoroughly refereed proceedings of the 21st International Conference on User Modeling, Adaption, and Personalization, held in Rome, Italy, in June 2013. The 21 long and 7 short papers of the research paper track were carefully reviewed and selected from numerous submissions. The papers cover the following topics: recommender systems, student modeling, social media and teams, human cognition, personality, privacy, web curation and user profiles, travel and mobile applications, and systems for elderly and disabled individuals.

Extensive literature already exists on the causes and development of the recent financial crisis and the political measures taken to manage it. This book brings together a group of renowned social scientists to focus on the interplay between international, European and national decision-making processes in the reform of financial market regulation. Are those states affected by the crisis adopting internationally negotiated regulations? Or are they instead determining the European and international reform agenda? Are the policies being agreed contributing to greater harmonization of financial regulation in a multilevel political system? Or is the process being dominated by differing national interests? The dominant concern of this book is the way in which the given multilevel structure of financial market regulation has shaped the reform process triggered by the recent financial crisis. Following an agreed set of questions, an international group of scholars deal in separate chapters with the role in the reform process played by international organizations, European authorities, and regulators in the USA, the United Kingdom, and Germany. To provide a detailed view of the vertical and horizontal interactions between these actors, the analysis focuses on a small set of reform issues, including bank structure, bank capital, resolution, and OTC trading of derivatives. The analysis shows to what extent actors at a given political level have both responded to, and shaped reform initiatives in other countries and at other political levels. Consideration is also given to a general shift in international governance, using financial market regulation as a case in point. The final chapter summarizes the pattern of multilevel policy-making resulting from the empirical analyses, highlighting features that distinguish it from familiar studies of multilevel governance in federal regimes and in the European Union.

This book constitutes the refereed proceedings of the 10th International Conference on Integrated Formal Methods, IFM 2013, held in Turku, Finland, in June 2013. The 25 revised full papers presented together with 4 invited papers were carefully reviewed and selected from 84 full paper submissions. The papers cover

the spectrum of integrated formal methods, focusing on refinement, integration, translation, verification, reachability and model checking, usability and testing, distributed systems, semantics, and system-level analysis.

This book constitutes the refereed proceedings of the 14th International Conference on Web-Age Information Management, WAIM 2013, held in Beidaihe, China, in June 2013. The 47 revised full papers presented together with 29 short papers and 5 keynotes were carefully reviewed and selected from a total of 248 submissions. The papers are organized in topical sections on data mining; information integration and heterogeneous systems; big data; spatial and temporal databases; information extraction; new hardware and miscellaneous; query processing and optimization; social network and graphs; information retrieval; workflow systems and service computing; recommender systems; security, privacy, and trust; semantic Web and ontology.
