Traffic engineering is a branch of civil engineering that uses engineering techniques to achieve the safe and efficient movement of people and goods on roadways. It focuss mainly on research for safe and efficient traffic flow, such as road geometry, sidewalks and crosswalks, cycling infrastructure, traffic signs, road surface markings and traffic lights. Traffic engineering deals with the functional part of transportation system, except the infrastructures provided. Traffic engineering is clos

Traffic engineering (transportation) - Wikipedia
Traffic Engineering is the subdiscipline of transportation engineering that encompasses the planning, design, and operation of the transportation network, adjacent land uses, and the interaction among all modes of transportation involved. A traffic engineer must understand not only the basic characteristics of the road user, the vehicle, and the roadway, but how each interacts with the others and how these interactions affect traffic operations and safety.
