Based on the National Communication Association's conceptual model for teaching and evaluating undergraduate public speeches (as developed by the author and others), Sherwyn P. Morreale offers a highly accessible, easy-to-teach, easy-to-learn approach to public speaking. The approach adopted in the text includes eight public speaking competencies - four on speech preparation and four on speech delivery - which are enhanced by emphasizing the impact of technology, ethics, culture, and diversity on public speaking. A number of unique features designed to improve teaching and learning include: - Students used as examples in each chapter so that readers can follow them as they learn about public speaking; -

Tables and boxed text to reinforce the most important learning points; - Checkpoint and self-assessment tools so that readers can determine their level of competence and find out whether they are ready to proceed to the next chapter; - Competence-building activities for students to apply chapter concepts and practice public speaking strategies in the classroom or as take-home assignments; - An accompanying website which is updated on a regular basis and offers a forum for students to contact the author. Designed for introductory-level public speaking courses taught at two- and four-year colleges and universities, this text offers a distinctively practical alternative for students and teachers to achieve consistency across multiple sections of the public speaking course. An instructor's manual is available on request.

Purpose, Practice, and Pedagogy in Rhetorical Criticism brings together fifteen rhetorical critics who address contemporary issues in criticism by answering three key questions: What is the purpose of rhetorical criticism? How do you practice rhetorical criticism? How do you teach rhetorical criticism? The book serves as both guide and resource in all three areas, presenting personal perspectives from top rhetorical critics.

This book presents the outcomes of a multi-methodical investigation of the processes of literacy acquisition. The focus is on mono- and bilingual first- and seventh-graders in schools in socially underprivileged areas of two major cities in Turkey and Germany. By means of extensive analyses of lesson videos, linguistic tests, interviews and ethnographic research, social, cultural, linguistic, pedagogic and didactic differences on the international, national, local and individual level are aligned with the momentary problem of exercising a school lesson and acquiring literacy on a daily basis. The results contradict to some degree that cultural and linguistic

differences actually make a huge difference in the organisation and process of literacy acquisition. With the interdisciplinary background of the book, it addresses academics concerned with migration sociology, migration linguistics, classroom research, and bilingual education. In a broader perspective, the book contributes to the pedagogically and politically significant question how social and cultural characteristics of specific groups are stereotyped and partly unjustly combined in order to reach symbolic solutions for actual problems.

Funny, amusing, baffling, Crazy. A collection of 'real life' short amusing stories. The book is in three sections; Miscellaneous stories; Tales from Paul's time as a partner in a recording studio in south London featuring some of the fascinating characters he encountered and Colonel Rage (Retired) a persona who hates modern life and views everything as a military man. A unique book in its own right, but influenced by the authors comedy heroes Spike Milligan, Peter Cook, The Goons, & more recently Ricky Gervais. The humour is dry, sometimes black and occasionally a bit silly but hopefully always entertaining. 'Are you ready to enter the Crazy World of Funny?'

These classroom-ready lesson plans—complete with literature lists, directions, sample forms, assessments, and adaptations—connect literacy learning with students' lives and the community.

First released in the Spring of 1999, *How People Learn* has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning.

Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do--with curricula, classroom settings, and teaching methods--to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. *How People Learn* examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain. How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

Changing schools at 11 or 12+ is a critical, often traumatic event in a pupil's career. Earlier studies had looked at this transitional stage from the schools' point of view, in the light of institutional aims and objectives. Originally published in 1984, this richly detailed and readable study looks at it from the pupils' point of view: it illustrates their perceptions of the transfer, their anxieties and their experiences. The book is the result of a research project, in which children transferring from a typical middle school to a typical comprehensive in a Midlands town were observed over a period of eighteen months. The authors reveal various ways in

which children adjust to a large, more complex school organisation, to new forms of discipline and authority, and new demands in school work. They emphasise the significance of teenage culture during this period, and identify an important area of interplay between school culture and sub-culture. They pay special attention to gender identities, and the ways in which these affect pupils' responses to different subjects in the curriculum. Finally, they consider the theoretical and policy implications of their survey, and make positive recommendations for improving school and classroom practice at both primary and secondary level.
