Explain the three basic steps required to add a gene to a genome. First you find a gene youre interested in moving, second once you find it you need to isolate it, you need to cut the gene out of the chromosomes its located in. third you need to insert the gene into the genome of a different organism.

A guide for kids by Tiki the Penguin. Genetic engineering (GE for short) is about scientists altering the 'recipes' for making life – the genes which you find in all living things. Doing this is very clever and seems to be very useful. Back in the 1990s, many 'Greens' campaigned against genetic engineering and still do.
